
Project Details

Project Name:	Real Estate Listing Website
Assigned To:	Kasapu Prem Sagar
Due Date:	2025-04-01

Description:

Project Description:

The **Real Estate Listing Website** is a web-based platform that allows **buyers, sellers, and agents** to list and browse properties. The system enables property owners to **upload property details**, while potential buyers can **search, filter, and inquire about listings**. The project will be developed using **PHP, Bootstrap, and MySQL** for a dynamic and responsive experience.

Features to Implement

1.

Property Listings Page

- Display **available properties** with images, descriptions, price, and location.
- Pagination to browse multiple listings efficiently.

2.

Property Details Page

- Show **detailed property information** when a listing is clicked.
- Include **property type, area, price, contact details, and amenities**.

3.

Search & Filter Functionality

- Users can **search for properties** by:

-
- Location
 - Price range
 - Property type (House, Apartment, Land, etc.)

4.

User Authentication (Buyers & Sellers)

- **Sellers can log in and add/edit/delete** their property listings.
- **Buyers can register to inquire** about properties.

5.

Admin Panel (Property Management)

- Admin can **approve, edit, or remove property listings**.

6.

Database Management

- Store **property details, user accounts, and inquiries** in MySQL.

7.

Security Measures

- Secure **user authentication and form inputs** to prevent SQL injection.
-
