
Project Details

Project Name:	Job Portal
Assigned To:	Tangella Rambabu
Due Date:	2025-04-01

Description:

Project Description:

The **Job Portal** is a web-based platform that connects **job seekers and employers**, allowing users to **search for jobs, apply for positions, and manage job postings**. Employers can post job vacancies, while job seekers can register, upload resumes, and apply for jobs. This project will be developed using **PHP, Bootstrap, and MySQL** to ensure a **dynamic and efficient recruitment process**.

Features to Implement

1.

User Authentication

- **Job seeker registration & login** to apply for jobs.
- **Employer registration & login** to post job openings.
- **Admin login** to manage users and job postings.

2.

Job Listings Page

- Display all available jobs with:
 - **Job title**
 - **Company name**
 - **Location**
 - **Job description & salary range**

3.

Job Application System

- Job seekers can **apply for jobs** by submitting resumes.
- Applications are stored in the database for employer review.

4.

Employer Dashboard

- Employers can **post new jobs** and manage their listings.
- View job applications from job seekers.

5.

Search & Filter Jobs

- Users can **search for jobs** by category, location, or salary range.

6.

Admin Panel (User & Job Management)

- Admin can **approve or delete job postings**.
- Manage **user accounts and job applications**.

7.

Database Management

-
- Store **user profiles, job postings, and applications** securely in MySQL.

8.

Security Measures

- Prevent **SQL injection and fake job postings**.
- Secure file uploads for resumes.
