
Project Details

Project Name:	Simple Poll System
Assigned To:	Pravallika Chukkaluru
Due Date:	2025-04-01

Description:

Project Description:

The **Simple Poll System** is a web-based application that allows users to **vote on a specific poll/question** and see real-time poll results. The system records user responses and dynamically updates the poll statistics. It will be developed using **PHP, Bootstrap, and MySQL** for a responsive and user-friendly experience.

Features to Implement

1.

Poll Creation

- Admin can **create a new poll** with a question and multiple-choice options.

2.

User Voting System

- Users can **select an option** and submit their vote.
- Restrict multiple votes from the same user (using session or IP tracking).

3.

Real-Time Poll Results

- Display a **bar chart or percentage breakdown** of votes.
 - Update results dynamically after a vote is cast.
-

4.

Database Management

- Store **poll questions, options, and vote counts** in a MySQL database.

5.

Admin Panel (Poll Management)

- Add, edit, and delete poll questions.
- View total votes for each option.

6.

Security Measures

- Prevent duplicate voting using cookies/sessions.
- Secure database queries to **prevent SQL injection**.
