Project Details

Project Name:	Event Registration System
Assigned To:	Kamparajula Lokesh
Due Date:	2025-04-01

Description:

Project Description:

The **Event Registration System** is a web-based application that allows users to **register for events online** and enables event organizers to manage participant details. The system will handle **event listings, user registrations, and participant management** efficiently. It will be developed using **PHP, Bootstrap, and MySQL** for a dynamic and responsive user experience.

Features to Implement

1.

   Event Listing Page

   - Display all available events with details (**title, date, venue, description**).

2.

   User Registration for Events

   - Users can **sign up for an event** by providing their name, email, and phone number.

   - Form validation to ensure correct data entry.

3.

   Database Management

   - Store **event details** and **registered participants** in a MySQL database.

4.

Admin Panel (Event & Participant Management)

- Add, edit, and delete **event details**.

- View and manage the list of **registered participants**.

5.

Confirmation & Notifications

- Display a confirmation message upon successful registration.

- (Optional) Send email notifications to participants after registration.

6.

Security Measures

- Prevent duplicate registrations for the same event.

- Implement input validation and SQL injection protection.
