Project Details

Project Name:	Job Portal
Assigned To:	Poodi Ramu
Due Date:	2025-04-01

Description:

Project Description:

The **Job Portal** is a web-based application that connects **job seekers and employers**, allowing users to browse job listings, apply for jobs, and manage job postings. Employers can post job vacancies, while job seekers can register, upload resumes, and apply for positions. The project will be built using **PHP, Bootstrap, and MySQL** for a dynamic and user-friendly experience.

Features to Implement

1.

   User Registration & Login

   - Separate login for **job seekers** and **employers**.

   - Secure authentication with **password hashing**.

2.

   Job Listings Page

   - Display available job posts with details:

     - **Job Title**

     - **Company Name**

     - **Location**

     - **Job Description**

     - **Salary Range**

3.

Job Application System

- Registered job seekers can **apply for jobs**.
- Upload **resume (PDF, DOC)** and store application details in the database.

4.

Employer Dashboard

- Employers can **post new jobs** and manage their listings.
- View applications from job seekers.

5.

Database Management

- Store **user profiles, job postings, and applications** securely in MySQL.

6.

Admin Panel

- Manage job listings and user accounts.
- Approve or delete job posts.

7.

Search & Filter Jobs

- Users can filter job listings by **category, location, or salary range**.

8.

Security Measures

- Prevent SQL injection and **validate user inputs**.

- Secure file uploads for resumes.
