Project Details

Project Name:	Contact Form with Database
Assigned To:	Dheeraj Chandra
Due Date:	2025-04-01

Description:

Project Description:

The **Contact Form with Database** is a web-based application that allows users to submit inquiries, feedback, or messages through a form. The submitted data is **stored in a MySQL database** and can be accessed by the admin. This project ensures efficient communication between users and the website owner. It will be built using **PHP, Bootstrap, and MySQL** for a dynamic and responsive experience.

Features to Implement

1.

   ### Contact Form Page

   - Fields: **Name, Email, Subject, Message**

   - Validation for required fields.

2.

   ### Form Submission & Database Storage

   - Save submitted messages in a **MySQL database**.

   - Store details like **Name, Email, Subject, Message, and Date**.

3.

   ### Admin Panel (Message Management)

   - Admin login to access messages.

- View all submitted messages.

- Option to **delete old messages**.

4.

Email Notification (Optional)

- Send an **email notification** to the admin when a new message is received.

5.

Security Measures

- Implement **input validation and SQL injection prevention**.

- Use **reCAPTCHA** to prevent spam submissions.
